

As you read:

10. Skim through the text and do tasks 1 and 2.

Task 1. Read the text.

Over 17 years of research by some social experts in the 1980s and 1990s led to the idea of what is now called the "Big Five" or "Five Factor Model" of personality. This model consists of five dimensions, and the researchers believe that the world is able to describe people and act on their behavior based on their scores on these five dimensions. The model is called the "Big Five" because it was first identified by five factors.

The model was very different. The study of some 4,000 adjectives was used to identify the five factors. The model was identified by using the computer program and was identified by the factor. The model was first used by the researchers in the 1980s. The model was identified by the researchers in the 1980s. The model was identified by the researchers in the 1980s. The model was identified by the researchers in the 1980s.
