

EARTH AND SPACE

LEVEL B

- Associate the seasons with differences in observed temperature

Worksheet "Which Season?" (photocopy masters included)

This worksheet has pictures for each of the four seasons. The children should write the name of the season below each picture, then answer the two simple questions below (requiring only the answers "summer" and "winter" respectively).

Worksheet "Seasons?" (photocopy masters included)

This worksheet has spaces for the children to draw and colour a picture for each season (the first picture has been drawn for them, they just have to colour it).

Worksheet "Mixed Seasons?" (photocopy masters included)

This worksheet has pictures for each of the four seasons in the wrong order. The children should write the name of the season in the space on each picture then cut them out. They should place the pictures in the correct order. You could also let them glue the pictures into their jotters and/or colour the pictures in.

Worksheet "What do you do when it rains?" (photocopy masters included)

This worksheet has space for the children to draw a picture and write a few words about what they would choose to do if it was rainy. This worksheet may be more suitable for more able children, as writing is required.

Worksheet "What do you do when it snows?" (photocopy masters included)

This worksheet has space for the children to draw a picture and write a few words about what they would choose to do if it was snowy. This worksheet may be more suitable for more able children, as writing is required.
