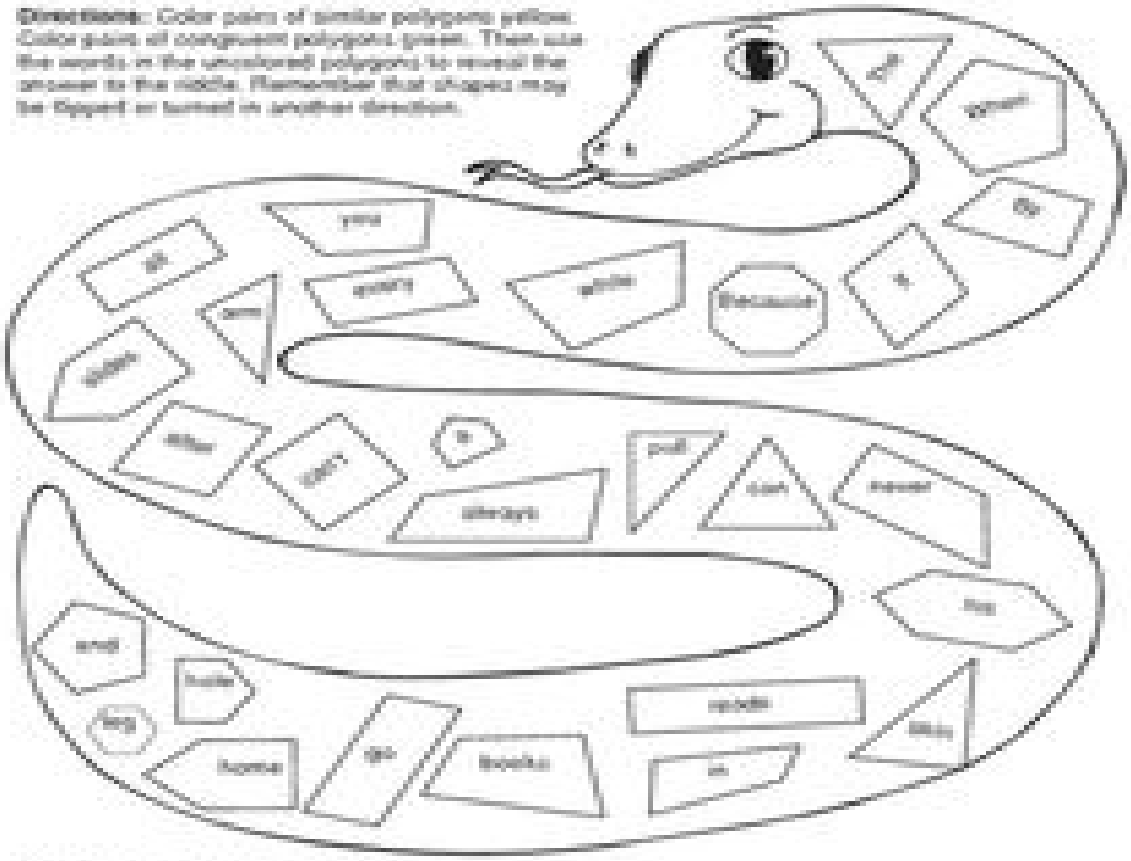
Name _____ Similar and congruent polygons

Polygon Python

Why is a python so difficult to trick? Find out by studying the polygons on the python's back to find similar and congruent shapes.

Directions: Color pairs of similar polygons yellow. Color pairs of congruent polygons green. Then use the words in the uncolored polygons to reveal the answer to the riddle. Remember that shapes may be flipped or turned in another direction.



Why is a python so difficult to trick? _____

BRAINCOGS On the back of this sheet, use a ruler to draw a rectangle. Then draw a similar rectangle with sides that are twice as long.
