| STRUCTURE OF THE BRAIN   | Name                                  |
|--|---------------------------------------|
| tabel the correct parts of the brain and spinal colore the purpose/function of each part.  a. cerebellum   | ord on the diagram at the left below. |
| b, medulla oblongata   |                                       |
| c, thalamus  |                                       |
| d. hypothalamus  |                                       |
| e. corpus callosum   |                                       |
| f. pons  |                                       |
| g. spinal cord   |                                       |
| h. cerebrum  |                                       |
| i. pituitary gland   |                                       |
| Johan of the Coreby up   |                                       |
| Lobes of the Cerebrum The diagram to the right above shows the four received in the cerebrum: frontal, parietal, occipital and temperatures blanks below with the correct answers. |                                       |
| The lobes control some bo  |                                       |
| emotions. The sense of vision is located in the $\_$   |                                       |
| nearing is interpreted in the  | lobes. Thelobes                       |
| nterpret sensations such as pain, pressure, touc   | n, hot and cold.                      |
