

Repeated Addition Coverall

HOW TO PLAY

Roll the dice.

The number you roll is the number that you will make a repeated addition sentence with using that number.

Then, roll again! The number you roll this time is the number of times your number will repeat.

Color in the squares for the TOTAL amount you would have!

Example: I roll a 2 the first time. I roll a 3 the next time.

My addition sentence would be $2 + 2 + 2 = 6$.

I would color 6 squares.

Take turns with your partner.

The first one to cover the entire board wins! Good luck!
