

Try subtracting these amounts of money in pence.
Then write the answer again in pounds.
I have done one for you.

Example $70p - 50p = 20p = \text{£}0.20$

1. $60p - 10p = \square = \square$

2. $70p - 50p = \square = \square$

3. $50p - 10p = \square = \square$

4. $65p - 25p = \square = \square$

5. $45p - 15p = \square = \square$

Remember to leave out the pence sign if you write the pounds sign.

These are a little bit harder!

6. $48p - 33p = \square = \square$

7. $57p - 26p = \square = \square$

8. $68p - 45p = \square = \square$

9. $74p - 52p = \square = \square$

10. $89p - 61p = \square = \square$

11. $94p - 32p = \square = \square$

12. $99p - 88p = \square = \square$

You may need to make some 'jottings' here to help with the subtraction.
