

Marijuana Facts for Parents

Marijuana is a drug made from the leaves and flower tops of the plant *Cannabis sativa*. All forms of marijuana contain THC, the main active ingredient in marijuana, which is responsible for its psychoactive effects. Marijuana's effect on the user depends on the strength or potency of the THC it contains. All forms of marijuana also contain more than 400 other chemicals.

Type of Marijuana	Many Terms	What it looks like	How it is used
Marijuana (cigarettes, hash, hashish, hash oil, blunts)	pot, weed, Mary Jane, hash, hash oil, blunt, kief, roach, cones, cones, Mary Jane, etc.	dark green or brown dried buds, stems, seeds, and leaves of the hemp plant.	smoked in pipe or rolled in cigarette, in blunt or hash, or eaten.
Hashish	hash	dark green like the hemp plant flowers, greenish-brownish with a bitter taste	smoked or eaten
Hash oil	hash oil	A tar-like liquid varying in color from clear to black	smoked or eaten

Effects of Marijuana

All forms of marijuana can be harmful in a number of ways, through both immediate effects and damage to health over time. Because users often inhale the unfiltered smoke deeply and then hold it in their lungs as long as possible, marijuana is damaging to the lungs and pulmonary system. Physical effects may include the following:

- Bloodshot eyes
- Reduced inhibition, risky sexual behavior
- Increased appetite
- Difficult concentrating, poor study habits
- Trouble handling complex tasks
- Dry mouth and throat
- Increased tolerance to heat and cold
- Loss of short-term memory (amnesia for recent events)
- Altered perceptions and reaction time

Today the THC content of marijuana is higher than in past. This makes marijuana more potent, which is how because the likelihood of psychotic reactions such as anxiety, paranoia and confusion. Long term users of marijuana may develop psychological dependence and require more of the drug to get the same effect. The drug can become the center of their lives.
