

20.

21.

Directions: Identify the incorrect lab procedures used by these students and explain what they should have done correctly.

22. Julia and Lisa are lab partners. When they move back to their lab tables, Julia asks Lisa if she would like to have a piece of gum and Lisa accepts and begins to chew the gum. As the lab continues, Lisa decides that she is beginning to get bored with the activity they are doing and decides that she wants to mix the contents of beaker A with the contents of beaker B. As she does this, she spills some of the contents of beaker A on the table and leaves it on the surface of the table when the lab is over with.
