

Question to Consider

10 minutes

Learning Objectives

Knowledge The student will understand	understand the relationship between the area of a square and the area of a rectangle, and how to find the area of a square and a rectangle.
Application The student will use	use the area of a square and a rectangle to solve problems involving area.
Proficiency The student will communicate	communicate the relationship between the area of a square and a rectangle to others.

Assessment

- 1. Knowledge** The student will understand the relationship between the area of a square and the area of a rectangle.
- 2. Application** The student will use the area of a square and a rectangle to solve problems involving area.
- 3. Proficiency** The student will communicate the relationship between the area of a square and a rectangle to others.
- 4. Knowledge** The student will understand the relationship between the area of a square and the area of a rectangle, and how to find the area of a square and a rectangle.
- 5. Application** The student will use the area of a square and a rectangle to solve problems involving area.
- 6. Proficiency** The student will communicate the relationship between the area of a square and a rectangle to others.
- 7. Knowledge** The student will understand the relationship between the area of a square and the area of a rectangle, and how to find the area of a square and a rectangle.
- 8. Application** The student will use the area of a square and a rectangle to solve problems involving area.
- 9. Proficiency** The student will communicate the relationship between the area of a square and a rectangle to others.

Assessment The student will understand the relationship between the area of a square and the area of a rectangle, and how to find the area of a square and a rectangle.
