CONDUCTOR AND INSULATOR

A conductor is a material that allows electricity to flow through it.
 An insulator is a material that electricity cannot flow through.

To determine whether an object is a conductor or insulator, you can build a simple circuit with a battery, light bulb, and three piece of wire.

Touch the free ends of the wire to the object you are testing. If the light bulb lights up, the object is made from a conductor. If it doesn't, the object is made from an insulator.

Complete the table. Predict whether each item is made from a material that is a conductor or insulator. Then test them to determine if it is made from a conductor or insulator!

Object	Prediction: Conductor or Insulator	Result: Conductor or Insulator
