

# Blank Periodic Table of the Elements

<http://chemistry.about.com>

©2008 Todd Helmenstine

The image shows a blank periodic table grid. It consists of a main grid with 7 rows and 18 columns. The first two rows have gaps at the beginning and end, representing the noble gases. The third row has 16 cells. The fourth, fifth, sixth, and seventh rows each have 18 cells. Below the main grid is a separate block representing the lanthanide and actinide series, which is 2 rows high and 14 cells wide.
