

LOGIC

PHI 103/PSY 103

Decide whether the following examples are deductive [D] or inductive [I] reasoning.

Be careful of the wasps, it might sting.

Being kind *is* a trait. The platypus *is* a kind. Therefore the platypus *is* a trait.

They were doing it, so I thought it would be so do do it all well.

You are not bad, therefore you must be good.

Oxygen and hydrogen are gases at room temperature. Therefore water (H₂O) is a gas at room temperature.

I've met three non-drivers today and they all were in their aggression. Clearly, non-drivers are all aggressive.
