

The Phosphorus Cycle Song
By Table 6

Phosphorus is found in the rocks and soil
Because it's formed after geological turmoil.
There are humans impacting the natural process;
The phosphorus cycle has harmful excess.
They're mining while I'm rhyming it;
And speeding up the time of it.
The cycle is more speedy
When the fertilizers get greedy.
The plants are growing each generation,
But the water is getting eutrophication.
From all the soil run off,
Yeah we've got to stop.

Plants to animals, and decomposers.
They use it and lose it,
And start it over.
Soil to water, and aquatic life,
Then the sediments settle for another time.
This is the phosphorus pathway,
It's so important; it's even in our DNA.

Here's the thing about the chemical reaction;
Rocks and soil lose their attraction
To the phosphate and ions which are released,
But don't decrease
Because the plants absorb the PO_4
Which goes to the animals and much more.
 PO_4 forms when phosphate and oxygen combine,
It also reacts with calcium and iron.
It can't be a gas
So in the atmosphere it won't pass.
