

DETERMINE THE MEAN**EXAMPLE:**

Luke is 12, Laura is 10, Harper is 5, Madison is 16, and Bill is 22. What is the mean of their ages?

Add the values. Divide by the number of items.

$$\begin{aligned}12 + 10 + 5 + 16 + 22 \text{ (all the ages)} &= 65 \\65 \text{ (number of people)} &= 5\end{aligned}$$

The mean of their ages is 13.

1. Luke has five dogs. Spot weighs 10 pounds, Spike weighs 13 pounds, Geronimo weighs 19 pounds, Blackie weighs 15 pounds, and George weighs 13 pounds. What is the mean of his dogs' weights?
2. Five friends go fishing. Mike's fish weighs 12 pounds, Sarah's weighs 10, Jill's weighs 10, Ed's weighs 16 and Sam's weighs 17. What is the mean of their weights?
