

An Unexpected Visitor

- A. Use the graph to fill out the table, listing the number of campers each month.
- B. Next, arrange the data for each set of campers in order from lowest to most.
 - adults _____
 - children _____
- C. Then use the graph, table, and data to answer the questions below.
 1. On average, how many adults camp at Hike-a-Lot each month? _____
 2. On average, how many children visit the campground each month? _____
 3. What is the difference between the average number of adult and the average number of child campers? _____
 4. During which month do the greatest number of adults camp at Hike-a-Lot? _____
 When do the fewest adults visit? _____
 What is the difference between the two numbers? _____
 5. During which month is the difference between the number of adults and children at Hike-a-Lot the greatest? _____
 In which month is the difference the least? _____
 6. During which months do the same number of adults camp at Hike-a-Lot? _____
 7. Are there any months during which the same number of children visit the campground? _____ Which ones? _____
 8. Why is this data shown on a double bar graph instead of a circle graph? _____

Monthly Campers at Hike-a-Lot Campground

Month	Adults	Children
April		
May		
June		
July		
August		
September		
October		

What do you think that last year's number for a growing forest?

Focus: Why do you think there is a decline in the number of child campers after July? Explain.
