

Find the inverse of the function:

$$y = (x+8)^3 + 7$$

Correct!

You said C:

$$y = \sqrt[3]{x-7} - 8$$

The correct answer is C:

$$y = \sqrt[3]{x-7} - 8$$

Correct answer explanation:

Interchange x and y :

$$y = (x+8)^3 + 7 \Rightarrow x = (y+8)^3 + 7$$

Solve for y .

$$x = (y+8)^3 + 7$$

$$x - 7 = (y+8)^3$$

$$y + 8 = \sqrt[3]{x-7}$$

$$y = \sqrt[3]{x-7} - 8$$
