

## Measurement of Total Protein by a Single Solution

### Question

Write a computer program to calculate the total protein concentration of a sample using a single solution. The total protein concentration is the sum of the concentrations of all the individual components. Assume the total protein concentration is 100 g/L.

### Task

Component	Concentration (g/L)	Percentage (%)
Albumin	55	55%
Globulin	35	35%
Fibrinogen	10	10%
Immunoglobulin	5	5%
Lipoprotein	5	5%
Enzyme	5	5%
Hormone	5	5%
Electrolyte	5	5%
Water	5	5%
Other	5	5%
Total	100	100%

### Expected Output
