

This diagram shows the internal components of a mechanical assembly. The main shaft is connected to a large gear at the top, which is likely the driving gear. The shaft then passes through a series of components, including a piston or valve mechanism, and a smaller gear at the bottom. The assembly is supported by a base with several mounting points. The star-shaped component on the left is likely a flywheel or a similar part. The diagram is a technical drawing showing the internal components and their arrangement.
