

This diagram illustrates the internal components of a mechanical assembly, likely a pump or motor. The main body is a cylindrical housing that encloses the internal parts. A central shaft is visible, which is supported by bearings and is connected to a rotating element, possibly an impeller or a motor rotor. The assembly is mounted on a base. On the left side, there is a distinct, star-shaped or gear-like component. The diagram is rendered in a pixelated, grayscale style.
