## Habitats

Directions: Match each animal to its habitat.

American Alligator

Diamondback  
Rattlesnake

Salamander

Emperor Penguin

Lobster

Atlantic Puffin

This small animal builds a den, usually in a hollow or burrow in the cold open tundra or area of the north pole.

Very comfortable hiding under rocks, old logs, or stumps/branches, crevices, and stumps, this little creature likes to stay wet.

Adapted with a thick layer of fat and scale-like feathers for the frigid South Pole, this animal enjoys the cold ocean and icy terrain.

Located in the North Atlantic Ocean along the coastline, this crustacean usually lives in the shallow waters at less than 50 meters. The rocky bottoms, covered in algae, make it easy for these creatures to hide.

Mainly found in Florida and Louisiana, this reptile spends its time in muddy swamps and marshes that house lots of prey.

This venomous reptile is found mostly in the hot states of Georgia and Florida in dry, sandy areas or around wiregrass and pinehills. Although they avoid wet areas, they are good swimmers and sometimes can be found around
