

**Word Problems: Systems of Equations**

Name: \_\_\_\_\_

Mr. Karolynca

(Show work for credit.)

Set up a system of equations for each problem. Then, solve each system by whatever mathematical means you like.

- 1) John bought tickets and chairs for his softball team. He bought 10 total items and spent \$2000. Each ticket cost \$100 and each chair cost \$50. Let  $x$  represent the number of tickets and  $y$  represent the number of chairs. How many tickets and chairs did he buy?
- 2) Mrs. Pige and Bill bought tickets for her table tennis. She paid two types of tickets: large-denomination chips and small-denomination tickets. She changed \$1 for the denomination chips and \$0.50 for the small denomination and collected \$275 total. How many of each type did she buy?
- 3) Peter's Store sold 200 total items from the shelves with 400 items (\$2 each) and 100 items (\$1 each) from the shelves. It took \$200 to make. How many items and how many shelves did it sell?
- 4) Penelope's Printing Press primarily sold 3 cent pencils and 10 cent pens to the public. It sold 1000 writing utensils and took in \$20.00 in sales. How many pens and how many pencils did Penelope's Printing Press sell?
- 5) Greg "Overlord" Barnack used to collect cards as a child hobby. He had 80 CDs, which were rock and pop CDs. He bought his CDs at a table rate \$4 for rock and \$2 for pop CDs. If his collection was worth \$200, how many of each type of CD did he own?
- 6) Bill's store has two interchangeable categories. The store accumulated and collected items and across the store every week, which is a total of 100 items. She charges \$40 for accumulated and \$20 for collected amounts. Every week, she takes in \$2000 in revenue. How many amounts of each type does she average?
- 7) These manufacturers Mexican and American flags. Due to the rate of sales, she charges \$20 for Mexican flags and \$15 for American flags. She sold every night flags and accumulated \$400. How many flags of each type did she sell?
- 8) Kathy Stone had a special one-time-only collection. It sold 20 for \$1 and 100 for \$2. It sold 40 tickets as a single day and received \$100. How many tickets and of which type were sold?
