

<sup>6</sup> Drugs enter the body in many different ways. You are probably most familiar with drugs you take by mouth - either by liquid, tablet, or capsule. Sometimes an implanted pump can inject drugs into your body. Sometimes a needle can be used. Some drugs are inhaled. Sometimes patches release the drugs into your skin. Sometimes drugs are applied topically to the skin. A doctor will decide the appropriate amount and approach for the patient.

<sup>7</sup> Drugs are serious business. They should only be used for their intended purpose and when a doctor or parent gives them to you.
