

# Number Bond Addition to make 10

Name: \_\_\_\_\_

Number bonds are a way for you to mentally add numbers in your head. When you think of how you can make the closest ten from the biggest number, you can create a bond. In the example, 6 is four away from 10. So you can break the 8 into two 4's. When you do that the 6 becomes 10 and what's left over is 4, so  $10 + 4 = 14$

Use mental math to solve.

$6 + 8 =$

$2 + 9 =$

$7 + 8 =$

$3 + 8 =$
