## OMO: Itemized Shopping List

Use your Meal Planner to create a shopping list for the month. In reality, you may only go shopping every week or two, but for this assignment, we are looking for average monthly expenses. Please list all food and items purchased during the month. For items that you would not completely use up in a month, divide the price by the length of time (months) that it would take you to use the item. (ex. Toothpaste lasts 3 months and costs \$2.39. Divide \$2.39 by 3 to get a monthly average cost.) Remember to tax non-food items at 7.75% (multiple cost of item by .0775).

Item	Quantity needed	Price	(Q x P)= Monthly total	Tax?
