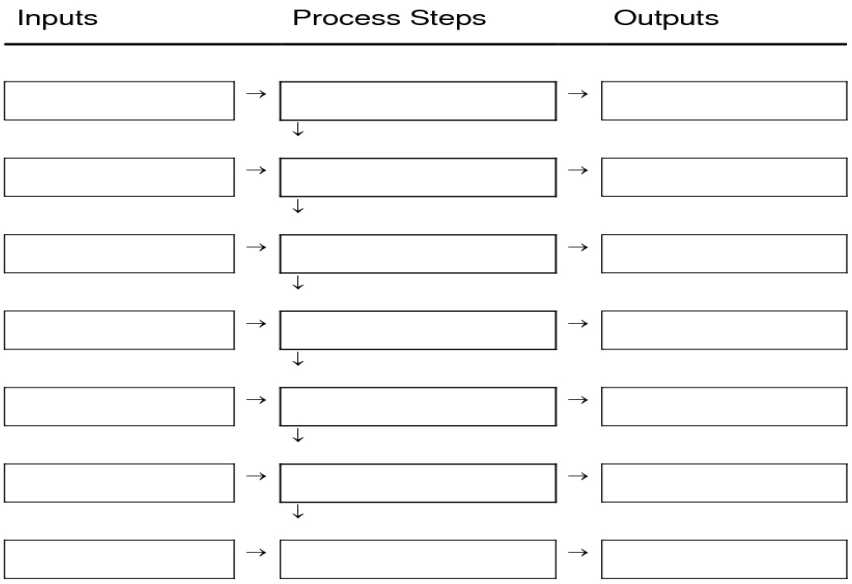
Input/Output Diagram Worksheet

For each of the process steps identify the main raw material, water and energy inputs, and product and waste outputs. Remember that for every input there must be a corresponding output; account for all wastes and emissions.

This is a word document – it may be modified, saved and printed as required. Alternatively, it may be easier to draw these diagrams free-hand.

Inputs: Raw materials
Water
Energy

→ Process Step →

Outputs: Product
Solid waste
Liquid waste
Gaseous waste
waste heat (energy)


Winery process:_____
