

7th grade - Integers Game Project

For this project you will create a game that deals with integers. It can be a board game, a card game, or a dice game. Along with the game, you will provide me with a written persuasive piece. The game portion of this project will be graded on these items:

- A. The game must contain the use of operations on integers in some way and not just moving forward or backward.*
- B. Spelling: All game components should be spelled correctly (rules, game cards, etc.).*
- C. Creativity: your game can be based off of a current game but must be made your own in some way.*
- D. Rules/directions: The rules and directions must be included and spelled correctly.*
- E. Appeal: The game should look and be appealing. There should be visually appealing packaging for the game.*
- F. The game should be designed for people your age and not young children.*

Guidelines for the paper:

Write the paper as if you were trying to persuade me to buy your game for children. Please include the educational benefits this game will provide. Also, tell why children will want to play this game and be specific about its qualities. Don't just tell me that it's fun. What makes it fun? What makes it appealing to children?

Due date: Monday, October 12th
