

PROBLEM SOLVING TASK CARDS -Working Backwards

Problem 1

Measurement

Level 1

When three girls jumped on a weighing scale together, it read 564 kilograms. One girl stepped off and the scale moved down to 304 kilograms. One more girl jumped off and the scale showed 58 kilograms. What was each girl's weight?

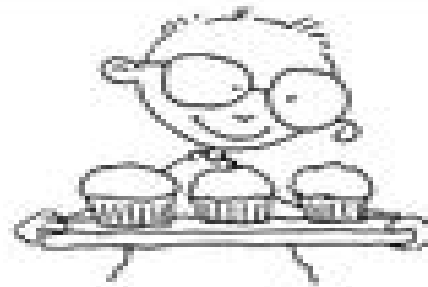

Problem 2

Number | 2.1

Level 1

Arnold baked cupcakes over the weekend. Each day during the week he took three cakes to school to share with his friends. On Saturday when he counted there were 18 left. How many had he baked?

Problem 3

Number | 2.1

Level 1

Daniel has lots of pets. He had four more goldfish than he had turtles. He had one less canary than goldfish. Six of his pets are birds (canaries and parrots). He has two parrots. How many pets does Daniel have?
