

4. Draw a picture and label the electron configuration, correct number of neutrons, and protons, of Sodium. (use periodic table)

5. The most common element in the earth's crust is

- a. Oxygen
- b. Hydrogen
- c. Nitrogen
- d. Carbon
- e. Silicone
- f. Magnesium

6. An example of a diatomic element is

- a. H_2SO_4
- b. CO_2
- c. O_2
- d. Fe_2O_3
- e. O_3

7. Three atoms of Oxygen that make a molecule which hurts people's breathing, especially with asthma. What do we call this molecule?

ozone

8. Draw what the separator line between metals and non-metals looks like.
