

**Problem solving: distances**

Complete the tables below:

1.

<b>Step 1</b> Read and understand the problem.	You travel at 42 mph for 4 hours. How far will you travel?
<b>Step 2</b> Work out what calculations you need to do.	
<b>Step 3</b> Carry out the calculations and answer the problem.	
<b>Step 4</b> Check your answer works.	

2.

<b>Step 1</b> Read and understand the problem.	A distance is given as 72 km. One km is a bit more than half a mile. What would be a good estimate for an equivalent in miles?
<b>Step 2</b> Work out what calculations you need to do.	
<b>Step 3</b> Carry out the calculations and answer the problem.	
<b>Step 4</b> Check your answer works.
