W	ave Properties - Station 1	
Vaves have a property called an	mplitude. The amplitude of a	a wave describes how much
it h	as. It is measured from the	line of origin to the top of
he wave (the). Or it can be r	neasured from the line of
rigin to the bottom of the wave	(the). Amplitude is related to
he volume or		
amplitude, the sound will be		
sound will be		
loud	crest	trough
energy	loudness	soft
I. Draw a wave that would be se	oft. Is the amplitude big or s	mall?
2. Draw a wave that would be lo	ud. Is the amplitude big or:	small?
2. Draw a wave that would be lo	ud. Is the amplitude big or:	small?

Get a handout with the pictures and waves. Cut each one out along the lines. Put the pictures in order from loudest to softest. Put the waves in order from loudest to softest. Glue them on the back of this sheet.
