

## Animal Cell Organelles Quiz

1. Each cell has a protective, semi-permeable, outer layer called the \_\_\_\_\_.

2. Inside the cell, the watery medium in which all the organelles float is called \_\_\_\_\_.

3. Little grains floating around inside the cell involved in protein production are called \_\_\_\_\_.

4. The cell \_\_\_\_\_ contains our DNA with all our genetic information found on 23 paired structures called \_\_\_\_\_.

5. It is surrounded by a protective \_\_\_\_\_.

6. \_\_\_\_\_ is a series of folded membrane pathways studded with ribosomes. Together they make new proteins and membranes.

7. \_\_\_\_\_ has no ribosomes on it and forms containers called transport vesicles that are used to move things around inside the cell.

8. \_\_\_\_\_ are packages things to be transported out and around the cell.

9. \_\_\_\_\_ are vesicles with digestive enzymes inside to break down the things the cell no longer needs.

10. \_\_\_\_\_ are membrane lined membranous sacs for storing things. Vesicles are smaller sacs.

11. \_\_\_\_\_ have a double membrane with finger-like \_\_\_\_\_ and break down sugars to make energy for the cell.
