

Wanda's Information Booklet

Directions: Read over these silently. Complete this book silently.

Worksheet on "The Water Cycle"

1. The water cycle begins with water from puddles or oceans.
2. Then the water evaporates and forms water vapor.
3. Then the tiny drops of water form clouds.
4. When the droplets begin to bump together in the sky and get too heavy, they fall from the clouds as drops of rain.
5. Then the water cycle begins again.

A. COLOR THE PICTURE

When the droplets begin to bump together in the sky and get too heavy, they fall from the clouds as drops of rain.
drops of water form clouds

Then tiny

Water evaporates and forms water vapor

The water cycle begins with water from puddles or oceans.
