

## Examples of Cave Types

**Glacier Cave:** a cave formed in ice

**Limestone Cave:** a cave formed when a solution of water and carbon dioxide seeps through cracks in the earth's surface and dissolves limestone

**Sea Cave:** a cave at the base of a cliff that is formed by the force of waves

**Sandstone Cave:** a cave formed when wind and water loosen and carry away sand from a sandstone cliff

**Underwater Cave:** a cave that is underwater

**Lava-Tube Cave:** a tunnel-like cave that results when the outside of a hot lava stream cools and the hot lava in the center drains away
