Ten Commandments of software engineering

1. Bill Gates is the chief architect. Though shalt not have other architects before him.
2. Thou shalt not clone, plagiarize, copy, or hack Windows anywhere under the heavens. Though shalt not be tempted by Linux, for the chief architect is jealous.
3. Thou shalt not take the name of Bill Gates in vain, and though shalt not pronounce *BillG* as "bilge".
4. Remember the Sabbath. Six days and 100 hours shalt thou labor and do work, and on the Sabbath thou shalt play Xbox Live and drink micro-brewed beer.
5. Honor the chief architect and his wife Melinda, that Microsoft stock may once again soar to great heights and make us all stinking rich.
6. Thou shalt not complain about the Blue Screen of Death; it is the third-party vendor's fault.
7. Thou shalt not run a dual-boot computer or any computer with Linux on it.
8. Thou shalt not steal: Pay for every copy of Windows and license all Microsoft software (see #5).
