

Mean, Median or Mode

Mean is the average: To find the mean add all the numbers and divide by how many numbers there are.

Ex. 18, 15, 14, 9, 14

Add all numbers and divide by 5 because there are 5 numbers in the list.

Mode is the number that occurs most in the list.

Ex. 18, 15, 14, 9, 14

The mode would be 14 because it occurs more than any other number.

Median: The number in the middle when you list the numbers from least to greatest.

1. List the numbers from least to greatest.
9, 14, 14, 15, 18
2. Find the middle number: 14 is the median.
