

Lab 3: Human Impacts, Biodiversity, & Environmental Issues

Part I

Provide 1-2-3 potential modifications to your lit paper that will make your paper more clear. Identify with detail (using specific evidence from the text) the specific benefit that each change may result. What would your hope/expectation be for each of these three modifications? Explain how, and comment on why you give priority/modifications that they should benefit the topic, subject, audience, and/or the specific article sources being

Example: My goal is to ultimately reduce the usage of plastic water bottles as necessary for each student's health and enjoyment of school. Specifically, I will suggest alternatives to these water bottles, such as water fountains that are free for use throughout the school grounds, or reusable water bottles for each student to use in their classrooms. I will also suggest that the school should have water fountains that are free for use throughout the school grounds. I will also suggest that the school should have water fountains that are free for use throughout the school grounds. I will also suggest that the school should have water fountains that are free for use throughout the school grounds. I will also suggest that the school should have water fountains that are free for use throughout the school grounds.

- Reusable water bottles
- Water fountains throughout the school grounds
- Encourage refill stations

Part II

Choose 1 modification to your lit paper. Write for 1 page (rough draft) 1-2 paragraphs in your response to the following:

- What are the benefits of this modification?
- How does your modification make these things happen?
- How much? (e.g. how much water/fountains will cost, 1 or 20? etc.) What if you were the responsible organization? (i.e. how would you implement this?)
