

Computer Data Storage

Computer

Indexed Questionnaire - The mode of data input will be decided on the basis of model of printed questionnaire. If the questionnaire consists of multiple sections, optical scanner is the best choice. The keyboard typing or uploading the scanned version of written paper is suitable for identical papers which require description about the input.

Telephone Survey - Automated computer system captures the details of survey. In this system user defines the range of business area related to type, geographical area etc. If the instructions are already explained to participants. Collection of data through paper which needs the presence of subject matter expert. Business interaction is essential which responses can be recorded into the system.

Smart Tags - RFID for International bar code is best method of input in the case of identifying the information embedded in each tag. It can be profitable in the case of low error rate code is attached to the item. This code is verified easily by attendance of traffic person or customer. Still it faces the lack of RFID-growth. But business interaction is possible choice for recording the details.

Web-Crawler - Automated systems of web-crawler provide the optimal choice of getting the information in efficient manner to reduce the human errors. Web-crawler checks is required to verify the correctness of details related system. For uploading the exact description mentioned in checks without being error which due to customer's error or misinformation.

Long Documents - Automatic uploading process of scanned version of long documents is most suitable choice of paper format of long documents is already available. Related typing business essential in the domain of paper-format.
