

5. A 9.07×10^{-9} solution of hydrobromic acid is made.

What is the concentration of hydronium?

$$[\text{H}_3\text{O}^+] = 9.07 \times 10^{-9} \text{ M}$$

What is the hydroxide concentration?

$$[\text{OH}^-] = \frac{1 \times 10^{-14}}{9.07 \times 10^{-9}} = 1.10 \times 10^{-6} \text{ M}$$

What is the pH?

$$-\log(9.07 \times 10^{-9}) = 8.04$$

What is the pOH?

$$14 - 8.04 = 5.96$$

6. A 4.65×10^{-1} M solution of aluminum hydroxide is made.

What is the concentration of hydronium?

$$[\text{H}_3\text{O}^+] = \frac{1 \times 10^{-14}}{1.40} = 7.14 \times 10^{-15} \text{ M}$$

What is the hydroxide concentration?

$$[\text{OH}^-] = 3(4.65 \times 10^{-1}) = 1.395 = 1.40 \text{ M}$$

What is the pH?

$$14 + 0.146 = 14.146$$

What is the pOH?

$$-\log(1.40) = -0.146$$

7. A 0.072 M solution of hydrochloric acid is made.

What is the concentration of hydronium?

$$[\text{H}_3\text{O}^+] = 0.072 \text{ M}$$

What is the hydroxide concentration?

$$[\text{OH}^-] = \frac{1 \times 10^{-14}}{0.072} = 1.39 \times 10^{-13} \text{ M}$$

What is the pH?

$$-\log(0.072) = 1.14$$

What is the pOH?

$$14 - 1.14 = 12.86$$

8. If the pH of a hydrochloric solution is 4.5,

What is the concentration of hydronium?

$$[\text{H}_3\text{O}^+] = \text{antilog}(-4.5) = 3.2 \times 10^{-5} \text{ M}$$

What is the hydroxide concentration?

$$[\text{OH}^-] = \text{antilog}(-9.5) = 3.2 \times 10^{-10} \text{ M}$$

What is the molarity of the solution?

$$3.2 \times 10^{-5} \text{ M}$$

What is the pOH?

$$14 - 4.5 = 9.5$$
