

Concept: Slope of a Line

Name: _____

PART A. Recall Component: (Off Computer Activity)

In *Understanding Graphing, Topic 6: Linear Relations*, we worked through 4 examples.

One of the examples was The Elastic Example

We let N be the # of washers (we also included parts of washers)

Let S be the length of the stretch of the elastic.

We calculated the ordered pairs. We noticed a pattern in these ordered pairs.

From the pattern we were able to write an equation which was ... _____.

We should graph _____ points so that we can "see" a _____.

Because we can attach _____ of washers,
we can _____ the points with a _____ line or a _____ curve.

PART B. Patterns in Special Relations (Off Computer Activity)

Objective: Investigate the roles of $\#1$ and $\#2$ in relations of the form $y = \#1x + \#2$

Investigation 1: Investigate the role of $\#1$ by keeping _____ constant and varying _____

Graph each of the following on the same axis below:

Clearly identify each line by using different colored pencils or pens.

How are the 3 lines above the same?

How are the 3 lines different?

What seems to be the role of $\#1$ in an equation of the form $y = \#1x + \#2$??

Investigation 2: Investigate the role of $\#2$ by keeping _____ constant and varying _____
