## Gas Law Stoichiometry Worksheet

Directions: Use significant figures and units in the problems below.

1.	Given the following <u>unbalanced</u> chemical equation for the combination reaction of sodium metal and chlorine gas:		
	Na <sub>(s)</sub> +CI <sub>2(g)</sub>	NaCl <sub>(s)</sub>	
	<ul> <li>a. What volume of chlorine gas, measured at STP, i reaction of 4.81 g of sodium metal.</li> </ul>	s necessary for the complete	
	reaction of 4.61 g of sodium metal.		
2.	$C_3H_{8(g)}$ + $O_{2(g)}$ $CO_2$	(g) +H <sub>2</sub> O <sub>(g)</sub>	
	<ul><li>a. Balance the above reaction.</li><li>b. What volume of oxygen gas at 25°C and 1.04 atm</li></ul>	n is needed for the complete	
	combustion of 5.53 g of propane?		
3.	. Potassium permanganate, KMnO₄, is produced commercially by oxidizing aqueous potassium manganate, K₂MnO₄		
	K <sub>2</sub> MnO <sub>4 (g)</sub> +Cl <sub>2(g)</sub> KMn	nO <sub>4 (g)</sub> +KCl <sub>(g</sub>	
	<ul> <li>a. Balance the above reaction.</li> <li>b. What volume of Cl<sub>2</sub>(g), measured at STP, is need</li> </ul>	led to produce 10.0 g of	
	KMnO₄?		
4.	<ol> <li>If water is added to magnesium nitride, ammonia gas is produced when the is heated.</li> </ol>		
	$\underline{\hspace{1cm}}_{Mg_3N_{2(g)}} \hspace{1cm} + \hspace{1cm} \underline{\hspace{1cm}}_{H_2O_{(g)}} \hspace{1cm} \underline{\hspace{1cm}}_{MgC}$	P <sub>(g)</sub> +NH <sub>3(g)</sub>	
	<ul> <li>a. Balance the above reaction.</li> <li>b. If 10.3 g of magnesium nitride is treated with 10.3 ammonia gas would be collected at 24°C and 752</li> </ul>		
	ammonia gas would be collected at 24 C and 752
