

QUESTION 1

Introduction

During the last century, the world has seen a rapid increase in the number of people living in urban areas. This has led to a number of problems, including air pollution, traffic congestion, and a lack of green spaces. One of the most significant problems is the loss of biodiversity. As urban areas expand, natural habitats are destroyed, and many species are lost. This is a serious problem because biodiversity is essential for the health of our planet. It provides us with many of the services we need to survive, such as clean air and water, and it helps to regulate the climate. Therefore, it is important to find ways to protect and restore biodiversity in urban areas.

What are the main reasons for the loss of biodiversity in urban areas?

- 1. Habitat destruction
- 2. Pollution
- 3. Fragmentation
- 4. Invasive species
- 5. Loss of genetic diversity
- 6. Climate change
- 7. Over-exploitation
- 8. Lack of conservation efforts

How can we protect and restore biodiversity in urban areas?

What are the benefits of biodiversity in urban areas?

What are the challenges of biodiversity in urban areas?
