

QUESTION 1

Introduction

During the last century, the world has seen a rapid increase in the number of people living in urban areas. This has led to a number of problems, such as air pollution, traffic congestion, and a lack of green spaces. One of the most significant problems is the loss of green spaces, which are essential for the health and well-being of urban residents.

There are a number of reasons why green spaces are important in urban areas. They provide a number of benefits, including:

- Improved air quality
- Reduced noise pollution
- Improved mental health
- Increased physical activity
- Reduced crime rates
- Improved social cohesion
- Reduced energy consumption
- Improved water quality
- Reduced urban heat island effect
- Improved property values

There are a number of ways to increase the amount of green space in urban areas:

There are a number of challenges to increasing green space in urban areas:

There are a number of ways to overcome these challenges:
