## Student Workbook Packet

Mathematics

Mathematics II

This packet contains the materials necessary for one student in the course **Mathematics II** instruction. It contains materials for support and being able to work in using a variety of mathematical concepts provided in the **Instructional Materials**. Materials used throughout the unit include the development of the concepts of area and perimeter, volume, surface area, and other concepts in another area of geometry.

There is approximately one worksheet every two lessons. The packet also includes a list of worksheets and the lesson work sheets that are used in class.

Materials provide additional or extended work for students. There is some enrichment for the students.
