

QUESTIONS

Typical rain forest are found in the Amazon basin of South America, as well as in Central America, Africa, and parts of Southeast Asia. There are many other rain forests around the world. The total area of rain forest in the world is about 1.7 billion hectares (4.2 billion acres).

Some rain forests are being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast.

Millions of people are still destroying the world's tropical rain forests. Every 100,000 square kilometers are being destroyed every year. About a quarter of the destruction comes from people cutting down trees for fuel. Another quarter is to make ground for farming. The remaining trees are cut down to make the ground for other uses.

The world's rain forests are growing, and more and more trees are needed to build large new buildings. For example, 1,000 trees from the Amazon rain forest in Brazil were used to build just one tall building. If people continue cutting down the rain forests, all the trees in the world could be gone in 100 years.

The world's rain forests are being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast.

Most of the world's tropical rain forests are being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast.

The world's rain forests are being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast. The largest tropical rain forest in the world is the Amazon basin in South America. It is being destroyed very fast.

Answer the questions according to the text.

1. Why do people cut down the trees in rain forest?

2. What happens to the trees when they are cut down?

3. Why do some people go to the rain forest to collect?

4. How do the people in the rain forest use the trees? Write the main effect of the cutting of the trees.
