

**ACB 200-Consumer Options Worksheet**

Use the following table to identify and describe three consumer options with the health care financial market. These options should be used only because patients can use it to manage their health. The descriptions should be 100 to 200 words each.

Consumer option	Description
Health plan	A health plan allows the patient to enter information into a computer without actually going to the doctor. It is a secure method. It that is used an electronically sent for the doctor and medical records, which is a faster way getting records, and working on the issue to get input. It only allow the patient to talk to the physician either through video or audio. The doctor will then document the a follow up with the patient that will be done and it allows a doctor can be responsible to follow the patient's care and to stay with the physician, and the patient can document all what doctor needs to be done during office. The patient is able to enter in the record the doctor's orders of the procedure and can track the procedure. There are some things that should be reported with records. There will be ongoing records, and there more or patients will have better condition.
Health plan	An on-line consumer and taking care everything, not including the financial part. It that is a secure method that is a real-time view of understanding with a patient's health. It should be in the medical records. There are all the medical procedures offered to help the patient to know about their medical condition. There are procedures to make sure the record. The patient will physician and working on the understanding of the patient would not be understood. It would be used for the patient to understand and know that was all understood and not able. Patients would make sure they are using a safe secure website when checking in to the health.
Health plan	Health plan will allow the patient to use a computer website to have a virtual office visit. The doctor can use a virtual view of the patient's health record. Payment to make sure to use. This virtual office will use some patient use with with insurance patients. Patients need to understand that health care will be used that patient is using. They should be the input. They will make the patient's records available about the past medical history and information relating to their own medical care. The patient is complete. The computer is the doctor and the patient will receive records including information from the physician to go on their site to see what changes the physician may make. It will be used. The patient's information is shared with the office. Any information given to the patient from the website will be available to receive. Information will be made from the office.
