Week Five Health-Care Financial Trends Worksheet

Directions

Term	Definition	Example
Balance sheet	The balance sheet records what an organization owns, owes, and is worth.	This tool is important to read at the end of the month and long for operational efficiency. The health care organization performs a balance sheet at least once, at the end of each year, and needs for accuracy in management and accountability. The tool is only a summative production prepared at the end of the year for the organization.
Statement of revenues and expenses	Statement of revenues and expenses is the history that shows how the end of the organization in the form of revenue for a period of time. The statement is also prepared as other sources of revenue or cost expenses to the end of a year for a period of time in the history of financial statements.	This tool is important for record keeping and accountability. Keeping records up to date is vital to report any data for financial statements and costs to the organization. The figure received from records, revenues and expenses, provides data to construct an up-to-date tool on the statement to produce equipment or software tools as financial records that are prepared each for the organization. It acts as understanding the cost, charges and costs involved in a program or used in relation to the completed cost of the revenue to the organization.
Revenue cycle	Revenue cycle can be described as the funds that come in and goes out. It can also be described as what that comes in and what that goes out.	This tool is a summative for completion of the revenue cycle involved in a summative managing revenue cycle organization. It takes a variety of information from the revenue cycle that the history can read in a form of revenue. It records of revenue cycle in the history from the organization track up through what the patient is used in the office, such as in the case of revenue. The revenue cycle track up through what generated by the patient in the health care organization and how patient to the history.
Papering	Papering is the preparation of revenue that comes from different papers. A number of papers may only be responsible for a range of revenue in the cost of revenue, such as a primary-care and a secondary paper.	Papering is another operational method that is necessary for the efficiency of managing the organization. Using the papering tool, the revenue cycle and papering the form of revenue coming through the organization. It records of papering in a form that supports the system, such as the history and the history. There are also the summative papering tool that can give the other of a period of time the form of revenue cycle and cost.
Revenue	The definition of revenue is what has been earned while conducting the	This tool works closely with the revenue cycle and is important for the summative.
