

$$-7x + 3y = 3$$

$$-7x + 3y + 7x = 3 + 7x$$

$$3y = 7x + 3$$

$$\frac{3y}{3} = \frac{7x + 3}{3}$$

$$y = \frac{7}{3}x + 1$$

$$\begin{cases} -7x + 3y = 3 \\ 14x - 6y = -16 \end{cases} \Rightarrow y = \frac{7}{3}x + 1$$
