**Summer: 15 Days or 2 1/2 Months?**

The final bell rings. It's the last day of school, and summer has finally come! Students don't have to think about school for at least another 2 1/2 months. That is the way it should always be. Schools should continue using the traditional calendar and not a year-round schedule. There are numerous downsides to year-round schooling. It has no positive effects on education, it adds to costs, and it disrupts the long-awaited summer vacation.

Contrary to the well-accepted belief, year-round schooling has no constructive impact on education. Most year-round schedules use the 45-15 method: 45 days of school followed by 15 days off. Because of this, there are many first and last days of school. All those transitions disrupt the learning process. Also, there is no evidence of higher test scores. Due to that, many schools that change to year-round schedules end up switching back. For example, since 1980, 95 percent of schools that tried the year-round schedule changed back to a traditional calendar. It is obvious that changing to year-round schooling does not help students; therefore, why is the change necessary?

Like any other facility, keeping a school open requires a great deal of money. When a school changes to a year-round schedule, the costs skyrocket. Keeping school open in the middle of summer requires air conditioning, and that adds significantly to the school's expenses. The usual utility bills grow because of the additional open-school time. Finally, teachers must be paid for all the weeks they are working. With all these factors, the cost of keeping schools open becomes immensely high. For example, a high school in Arizona had a cost increase of \$157,000 when they switched to year-round schooling. Some schools may not be able to handle such increases, and other schools that can handle these expenses could be doing better things with the money. Is year-round school really where the money should go?
