

**Course Name: CPR/First Aid/BBP/AED**

**Course Overview:**

It is highly recommended and even required in some companies to have employees properly trained in life saving techniques. TESCO is proud to offer a comprehensive program that efficiently trains industry professionals in multiple areas that have proven to save lives. The standards for CPR changed dramatically in November 2005 and it is important to keep your workforce updated and apprised of the latest information with the new changes. Many companies offer a CPR class without First Aid or AED, but this class includes CPR/First Aid/AED and BloodBorne Pathogen (BBP) information and/or certification. This content of this course is prescribed by the American Heart Association, and will be taught to their curriculum requirements. The day consists of written, oral and DVD presentations for maximum retention in a medical emergency as hands-on practice on AMBUman-a patented hygienic system. Participants are taught about the industry specific situations most likely to occur that would require the use of their new skills. Also, at home medical emergencies are discussed with all age groups ranging from infants to the geriatric population. This course is designed to meet the requirements of OSHA 1910.1030, the Bloodborne Pathogens standard.

**Course Length: 1 day**
