

Capacity is the amount a container can hold when filled. Correctly convert the unit of capacity shown on each container that T. Tucker will be carrying across the country. **Remember:** Multiply to change larger units to smaller units and divide to change smaller units to larger units.

**Customary Units of Capacity**

<p>8 fluid ounces (fl. oz.) = 1 cup (c.) 2 cups = 1 pint (pt.)</p>	<p>2 pints = 1 quart (qt.) 4 quarts = 1 gallon (gal.)</p>
--	---

1.	2.	3.	4.	5.
6.	7.	8.	9.	10.
11.	12.	13.	14.	

**Bonus Box:** If T. Tucker drinks a gallon of water each day that he's on the road, and he's on the road for two weeks, how many cups of water is that?
